Requires Some Winter Chilling

THE FRUIT, MATURING in autumn, is green, ellipsoid, and about the size of a chicken egg. It has a sweet, aromatic flavor. The fles is juicy and is divided into a clear gelatinous seed pulp and a firmer, slightly granular, opaque flesh nearer the skin. The fruit drops when ripe and at its fullest flavor, but may be picked from the tree prior to the drop to prevent bruising. The fruit pulp resembles the closely related *guava*, having a gritty texture. The feijoa pulp is used in some natural cosmetic products as an exfoliant. **Feijoa fruit** has a distinctive, potent smell. The aroma is due to the ester *methyl benzoate* and related compounds that exist in the fruit. It is a warm-temperate to subtropical plant that also will grow in the tropics, but requires at least 50 hours of winter chilling to fruit, is frost-tolerant. When grown from seed, some feijoas are noted for extremely slow growth during their first year or two and young plants, though cold tolerant, can be very sensitive to high wind. In the Northern Hemisphere, this species has been cultivated as far north as western Scotland, but under such conditions it does not fruit every year, as winter temperatures below

IN THE NORTHERN HEMISPHERE, this species has been cultivated as far north as western Scotland, but under such conditions it does not fruit every year, as winter temperatures below approximately -9°C kill the flower buds. Summer temperatures above 90°F may also have an adverse effect upon fruit set. Feijoas are somewhat tolerant of drought and salt in soils, though fruit production can be adversely affected. Tolerant to partial shade, regular watering is essential while the fruit is maturing. Large quantities of the fruit are grown in **New Zealand**, where it is a popular garden tree and the fruit commonly is available in season; the season runs from March to June. Feijoas are occasionally to be found as landscape plants in the far Southern United States, in regions from Texas to Florida, and southern California, though fruit set can be unreliable in those locations. They are also grown in parts of northern California for their fruit. Fruits are an *extremely rare sight* away from cultivation areas, and when they can be found, they are often very, very expensive due to scarcity and demand even in places where the fruit isn't well-known. *Hardier varieties are grown in Russian region of Buriatia.* The fruit is usually eaten by cutting it in half, then scooping out the pulp with a spoon. The fruit has a juicy, sweet seed pulp and slightly gritty flesh nearer the skin. If the utensils needed to eat it this way are not available, the feijoa may be torn or bitten in half, and the contents squeezed out and consumed. An alternative method is to bite the end off and then

Neuseeland befindet sich südlich des Äquators in der südlichen Hemisphäre. Alle neuseeländischen Inseln liegen isoliert im südwestlichen Pazifischen Ozean, das Land wird damit im Allgemeinen Ozeanien (insbesondere, wenn der Begriff Ozeanien auch Australien mit einschließt) zugeordnet, beziehungsweise in kleinräumiger Betrachtung als eine Insel Polynesiens angesehen. Teilweise wird es aber aufgrund der kulturellen Gemeinsamkeiten auch dem Kontinent Australien zugeordnet. Als Randmeer des Pazifiks liegt die Tasmansee im Westen der Hauptinseln und trennt Neuseeland vom

La Nouvelle-Zélande, en anglais New Zealand, en maori de Nouvelle-Zélande Aotearoa, est un pays de l'Océanie, au sud-ouest de l'océan Pacifique, constitué de deux îles principales et de nombreuses îles beaucoup plus petites, notamment l'île Stewart et les îles Chatham. Située à environ 2 000 km de l'Australie dont elle est séparée par la mer de Tasman, la Nouvelle-Zélande est très isolée géographiquement. Cet isolement a permis le développement d'une flore et d'une faune endémiques très riches et variées, allant des kauri géants aux insectes weta et en passant par les kaponga et le kiwi, ces deux

Debido a la naturaleza sin ley del asentamiento europeo y del creciente interés francés por el territorio, en 1832 el gobierno británico envió a James Busby como representante británico hacia Nueva Zelanda. Busby no pudo llevar la ley y el orden a la colonia europea, pero sí pudo supervisar la introducción de la primera bandera nacional el 20 de marzo de 1834. En octubre de 1835, tras un anuncio por el que impedían la soberanía francesa, la efímera nación de las Tribus Unidas de Nueva Zelanda envió la Declaración de independencia de Nueva Zelanda al rey Guillermo IV del Reino Unido, pidiendo

Nei confini della Nuova Zelanda e fuori, è aperto il dibattito sull'esistenza di una letteratura neozelandese autoctona e autonoma. Se gli studiosi si trovano concordi sull'esistenza di quest'ultima, non lo sono altrettanto sulla questione di un periodo di primario sviluppo, quindi la discussione è completamente aperta. Gli stessi scrittori, nati e cresciuti in Nuova Zelanda, dato il forte legame con la terra d'origine, tendono a ricondurre la loro opera all'interno di più vasti filoni: paradigmatico l'esempio di Katherine Mansfield e Dan Davin. Altri, invece, sono convinti dell'esistenza di una salda e forte

O país participou nos combates da Primeira Guerra Mundial e as perdas causadas pela guerra afetaram gravemente a demografia e a economia. Os neozelandeses, conjuntamente com a Austrália e o Reino Unido, obtiveram um mandato da Sociedade das Nações sobre as ilhas Samoa e sobre Nauru. A Nova Zelândia foi duramente afetada pela crise mundial de 1929. Ao partido nacional sucedeu em 1935 o partido trabalhista. O primeiro-ministro, M. J. Savage conseguiu restabelecer a prosperidade das campanhas, múltiplas obras públicas e desenvolveu a indústria. Os neozelandeses participaram ativamente

Nya Zeeland har en mycket vacker natur. Landet kan till stor del jämföras med till exempel Kanada, Norge och Chile. Från snötäckta berg till gröna skogar och öken. Det går att inom loppet av en timm besöka både öken, regnskog och karg kust. Det finns många arter som är endemiska. Anledningen är att Nya Zeeland skiljdes från Gondwana, för 82 miljoner år sedan. Arter som ingår i Podocarpaceae Nothofagus (Sydboksläktet) och bildar hela skogar. Mycket spektakulära finns, då särskilt det sk Kauriträdet, som dock är på väg att utrotas och därför åtnjuter legalt skydd. Landet har varit befolkat

Sinds Nieuw-Zeeland zich 80 miljoen jaar geleden van Gondwanaland afscheidde, heeft zich een volledig van de rest van de wereld geïsoleerde natuur ontwikkeld. Een deel van het oppervlak is bedekt met regenwoud dat tegenwoordig voor een groot deel tot nationale parken is verklaard. Er komen vele tientallen varensoorten voor. Te trapathea tetrandra is een plant die van nature in Nieuw-Zeeland voorkomt. De pohutukawa (Metrosideros excelsa) is een plant, die ook van nature aanwezig is in Nieuw-Zeeland en veel als sierstruik wordt aangeplant. Clianthus puniceus is een plant die in het wild

Gwiazdą rozslawiającą Nową Zelandię na całym świecie jest z racji swego maoryskiego pochodzenia sopranistka Kiri Te Kanawa. Ponadto z Nowej Zelandii pochodzi Neil Finn, lider znanego rockowego zespołu Crowded House. Wcześniej wraz z bratem Timem grał w bardzo popularnej w kraju w latach 70. i 80. grupie Split Enz. Najślyniejsza pisarka nowozelandzka to Janet Frame, bohaterka biograficznego filmu, znanego w Polsce pod tytułem: Anioł przy moim stole. Z Nowej Zelandii pochodzi też reżyser m.in. trylogii Władca Pierścieni, Peter Jackson. W specyficzny sposób swój kraj promują dwaj k
